Skills

Frontend Development	JavaScript	React.js	HTML
CSS	REST API	GITHUB	EcmaScript (ES)

Personal Projects

1. Restaurant Menu APP -

🔗 <https://shrutifoodapp.netlify.app>

- This project is based on checking the restaurant food menu where we can get the details of each food item .
- The project is basically developed on React.js Library.
- I created the food menu object as keys & values pair in a separate file inside the main folder of this project .
- I have used javaScript filter method to shorten the food menu in categories such as breakfast, lunch, and dinner.

2. Weather Report

- A React-based weather app that allows users to input a city and view real-time weather data, including temperature, humidity, wind speed, and a brief description.
- Utilizes OpenWeatherMap API for fetching weather information, offering a user-friendly interface for easy access to up-to-date weather reports.
